## contrec

## Application FC03

Single Channel
Flow Computer
for Mass Frequency or Analog Flowmeters

## Features

- Tailored to suit mass
flowmeters
- Programmable for either frequency or analog flow input
- Uses a live or fixed density value for mass to volume calculations
- Versatile "user value" available on main menu
- Selection of Detail or Basic main menu to suit operator and application
- Selection of second language and user tags
- RTC logging with over 1000 entries
- Programmable pulse width and scaling of pulse output
- 4-20 mA retransmission
- RS232 and RS485 or Ethernet (optional) serial ports
- Modbus RTU, Printer and other serial port protocols

## Overview

The 515 FC03 application pack is a rate totaliser for the measurement of a product using the frequency or analog mass flow signal output from a wide range of flowmeters.

The flow computer can calculate and display the flow rate, resettable total and the accumulated total for volume and mass, using a live or fixed density for the conversion.

The frequency input is compatible with a wide range of frequency signals, including millivolt signals, reed switches, Namur proximity switches and pulse trains via its smart front-panel program selection. The analog input can be scaled and have filtering, square law, non-linear correction and cutoff points applied to the signal.

A freely programmable "user value" on the main menu can serve as a setpoint for the $4-20 \mathrm{~mA}$ output or as an operator identifier to be logged.

## Calculations

For the frequency input the calculation of mass total is exact as the instrument collects all pulses detected on the input.
mass total $=$ pulses $/ k$-factor
The flow rates are derived from an accurately measured frequency:
mass flow $=$ frequency $/ k$-factor
For the analog input, to derive the flow rate, the analog signal is normalised to a value (A) between 0 and 1 .
mass flow $=\left(M_{f} \max -M_{f} \min \right) A+M_{f}$ min
total $=\int($ flow $\cdot \Delta t)$

Density is used to calculate the volume flow and total:
volume $=$ mass $/$ density

Accuracy•Quality• Performance

## Displayed Information

The front panel display shows the current values of the input variables and the results of the calculations. A list of the variables for this application and their type (total or rate) is shown at the end of this document.

The instrument can be supplied with a real-time clock for data logging of over 1000 entries of the variables as displayed on the main menu.

## Communications

There are two communication ports available as follows:

- COM-1 RS-232 port
- COM-2 RS-485 port (optional) or Ethernet (optional)

All types of ports can be used for remote data reading, while RS-232 and RS-485 serial ports can be used for printouts and for uploading and downloading of the application software to the instrument.

## Isolated Outputs

The opto-isolated outputs can re-transmit any main menu variable. The type of output is determined by the nature of the assigned variable. Totals are output as pulses and rates are output as $4-20 \mathrm{~mA}$ signals. One output is standard, a second output is available as an option.

## Relay Outputs

The relay alarms can be assigned to any of the main menu variables of a rate type. The alarms can be fully configured including hysteresis. Two relays are standard with two additional relays available as an option.

## Software Configuration

The instrument can be programmed to suit the particular application needs and the flexible I/O can be assigned as required. Program settings can be changed either via the front panel (depending on assigned access levels) or via the 500 Series Program Manager (500-PM software).

The instrument stores all set-up parameters, totals and logged data in non-volatile memory with at least 30 years retention.

## Ordering Information

## Product Codes

| Model | Supplementary Code |  |  |  |  |  |  | Description |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 515 |  |  |  |  |  |  | FC03 |  |
| Enclosure | 1 |  |  |  |  |  |  | Panel mount enclosure |
|  | 2/7 |  |  |  |  |  |  | Field mount enclosure (NEMA 4X / IP66) (7 specifies heater included) |
|  | 3/5 |  |  |  |  |  |  | Explosion proof Ex d (IECEx/ATEX), metric glands (5 specifies heater included) |
|  | 4/6 |  |  |  |  |  |  | Explosion proof Ex d (CSA), NPT glands (6 specifies heater included) |
| Output Options |  | 0 |  |  |  |  |  | 4 logic inputs, 1 isolated output, 2 relays (only relay type 1 is available), RS232 (DB9) communication port |
|  |  | 1 |  |  |  |  |  | 4 logic inputs, 2 isolated outputs, 4 relays, real-time clock data logging, RS232 (DB9) and RS485 communication ports |
|  |  | 2 |  |  |  |  |  | 4 logic inputs, 2 isolated outputs, 4 relays, real-time clock data logging, RS232 (DB9) \& Ethernet communication ports |
| Relay Type |  |  | 1 |  |  |  |  | Electromechanical relays only |
|  |  |  | 2 |  |  |  |  | 2 electromechanical relays (1-2) and 2 solid state relays (3-4) |
|  |  |  | 3 |  |  |  |  | Solid state relays only |
| Power Supply |  |  |  | U |  |  |  | Inputs for 12-28VDC and 100-240 VAC, 50-60Hz (Previous Models: $A=110 / 120$ VAC, $E=220 / 240$ VAC) |
|  |  |  |  | D |  |  |  | Input for 12-28VDC power only |
| Display Panel Option |  |  |  |  | S |  |  | Standard option (now with backlight \& LCD backup) (original Full option: F, with Infra-Red comms, no longer available) |
| PCB Protection |  |  |  |  |  | C |  | Conformal coating - required for maximum environmental operating range. Recommended to avoid damage from moisture and corrosion. |
|  |  |  |  |  |  | N |  | None - suitable for IEC standard 654-1 Climatic Conditions up to Class B2 (Heated and/or cooled enclosed locations) |
| Application Pack Number |  |  |  |  |  |  | FC03 | Defines the application software to be loaded into the instrument |

Example full product part number is 515.111 USC-FC03 (this is the number used for placing orders).
